

OVERVIEW

A UPS system is typically installed to support critical equipment by providing a continuous and reliable power source supported by battery backup. Like all equipment, to ensure continuous and reliable performance, it is necessary to perform regular preventative maintenance to identify any issues before they occur.

WHY IS ONGOING SERVICE IMPORTANT?

Without regular service, the integrity of the UPS and batteries are unknown. By implementing a regular preventative Maintenance program to monitor and perform system health checks, you can be assured that your equipment performs as required in the event of a power outage.

WHAT WE DO

At CPS National, we work closely with our clients to understand the challenges they may be presented with in order to determine the best solution taking into account the operating environment, the client's requirements and the UPS systems capabilities.

From this, we compile recommended solutions to support your requirements.

When it comes to supporting UPS systems that have been installed by CPS or other contractors, our clients benefit from the fact that we have extensive UPS background which means we can efficiently assess the equipment's performance and determine recommendations to meet clients expectations and requirements.

CPS National has offices in all mainland capitals of Australia to provide a national footprint of licensed and experienced technicians to meet your needs.

TYPICAL BENEFITS

With proactive regular maintenance and support, end users typically benefit from:

- Optimum system performance
- Proactive advice on how to better manage or enhance system infrastructure
- Improved operational uptime with critical power infrastructure working as intended

CERTIFICATIONS

We hold relevant Electrical Contracting license's in each state/territory we operate in. This is backed by our accreditation to AS/NZS4801.

PAST EXPERIENCE

CPS have performed UPS installation, service, maintenance and support throughout Australia in the following organization types / areas:

- Hospitals
- Telecommunications
- Universities
- Government
- Laboratories
- Mining
- Roads Organizations
- Financial Institutions and many more.
